RE: ACT/019/006

Dear Mr. Tetting:

In response to your letter of December 14, 1983, regarding the waste dump stabilization at the TMM-Bicentennial Mine, the following work has been completed.

1. The wash channel has been moved approximately 20-25 feet away from the toe of the waste dump. It has been widened to 10-11 feet by four feet deep.
2. The waste material on the right side of the channel has been moved to the Bicentennial dump.
3. Underneath the waste was approximately 1,500 tons of topsoil material which has been stockpiled.

The enclosed photographs are for your records and are explained on the backside.

The total disturbed area will be seeded this spring with the approved seed mixture.

If you plan on being in the area in the near future, I would be glad to accompany you out to the mine site.

If you have any questions, please call me at our Nucla office.

Sincerely,

W. D. Hester
